**clojure**  **spec**

Takes a lot of skill and hand tuning

```
46
47 (s/def ::layer (s/or :conv ::convolutional
48                     :maxp ::max-pooling
49                     :drop ::dropout
50                     :mutld ::multiplicative-dropout
51                     :relu ::relu
52                     :prelu ::prelu
53                     :bn ::batch-norm
54                     :lin ::linear
55                     :lrn ::local-response-norm))
56
57 (s/def ::layers (s/coll-of ::layer :min-count 1 :max-count 4))
58
```

# Spec it

# Generate Networks with spec

**Generate Networks with spec**

**Use Genetic Programming**

# Use Genetic Programming

```
1  Greeting please wait while we load all the MNIST data ...
2  The simulation will write the results of every gen to creature-report.txt
3  Running sim with pop-size 20  max-gen 5  tournament-size 4
4  Loading mnist training dataset.
5  Done loading mnist training dataset in 21.803s
6  Loading mnist test dataset.
7  Done loading mnist test dataset in 4.333s
8  Ensuring image data is built, and available on disk.
9  Building dataset from folder: mnist/training
10 Building dataset from folder: mnist/test
11 =====
12 =
13 =
14 =    Generation 0
15 =
16 =
17 =====
18 Recording results
19 = Working on creature  1
20 Training network:

How can you get  
Involved?

Welcome to fast.ai's 7 week course, **Practical Deep Learning For Coders, Part 1**, taught by Jeremy Howard ([Kaggle's #1](#) competitor 2 years running, and founder of [Enlitic](#)). Learn how to build state of the art models without needing graduate-level math—but also without dumbing anything down. Oh and one other thing... it's totally free!

When you're done here, head over to part 2, [Cutting Edge Deep Learning for Coders](#), to continue your learning.

*"fast.ai... can actually get smart, motivated students to the point of being able to create industrial-grade ML deployments"*

Harvard Business Review

*The Business of Artificial Intelligence*

## Reducing overfitting

[...]

### Resnet

```
In [4]: import resnet50; reload(resnet50)
        from resnet50 import Resnet50
```

```
In [5]: rn0 = Resnet50(include_top=False).model
```

```
In [7]: rn0.output_shape[1:]
```

I

*Designed for coders*

```
In [6]: batches = get_batches(path+'train', shuffle=False, batch_size=batch_size)
        val_batches = get_batches(path+'val', batch_size=batch_size*2, shuffle=False)
        (val_classes, trn_classes, val_labels, trn_labels,
         val_filenames, filenames, test_filenames) = get_classes(path)
```

**IF YOU CAN CODE, YOU CAN DO DEEP LEARNING**

**Learn from the Python deep learning ecosystem**

**Be inspired by what Clojure can  
bring to it**

**Seek bridges and collaboration**

Deep Learning is an exciting  
place to be right now!

# Deep Learning needs Clojure and you
